

All lizards are REPTILES

Diurnal:
active during daytime

eggs with
papery shell

claws

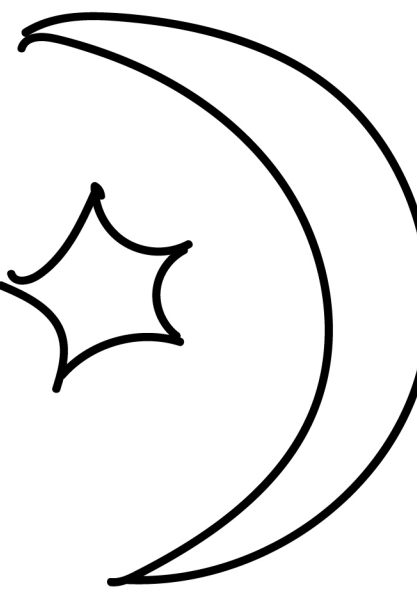

visible ear opening

scales covering body

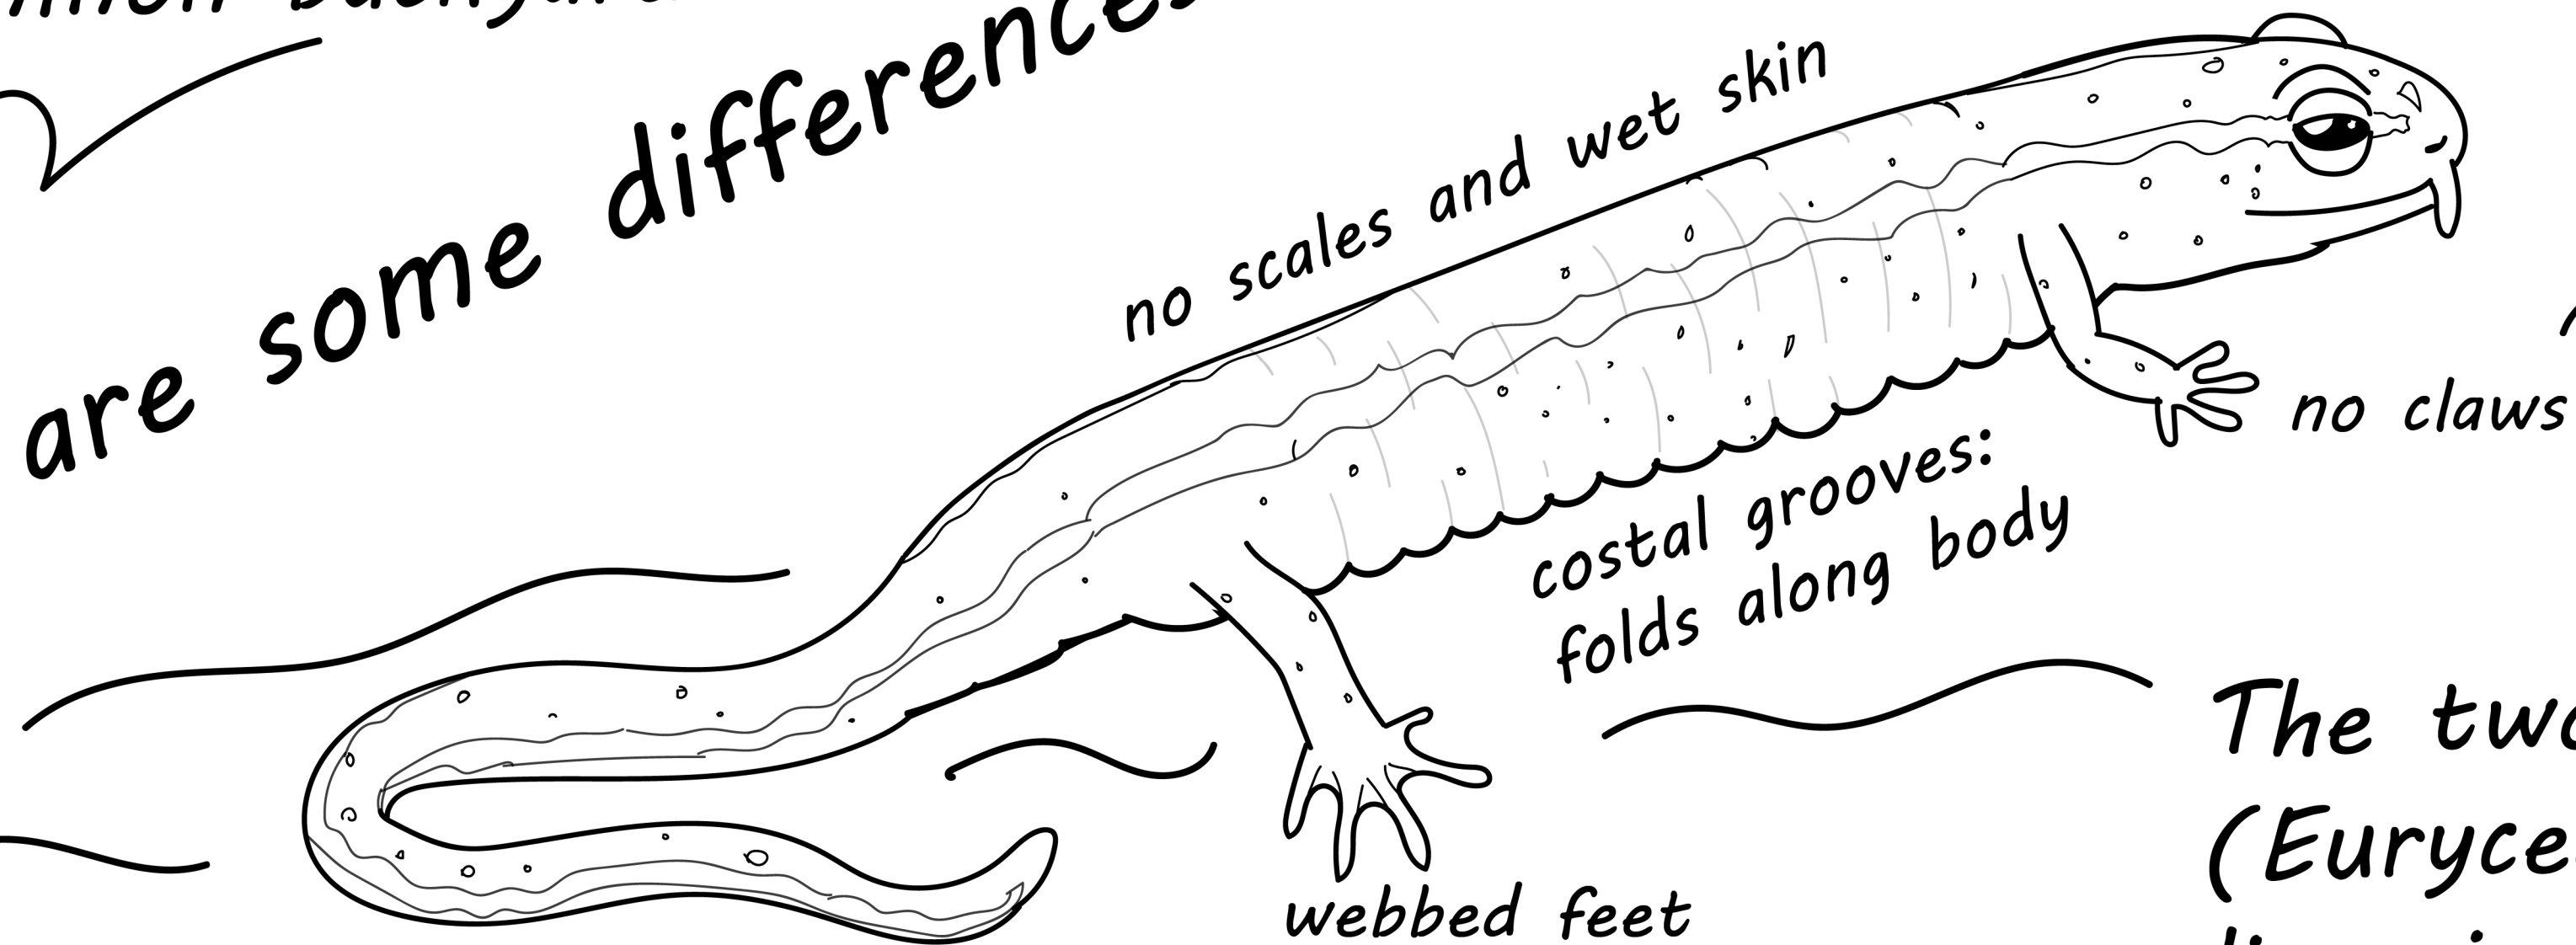

The five-lined skink
(*Plestiodon fasciatus*)
lives in forests and fields
and is a common backyard
lizard

What are some differences between lizards and salamanders?

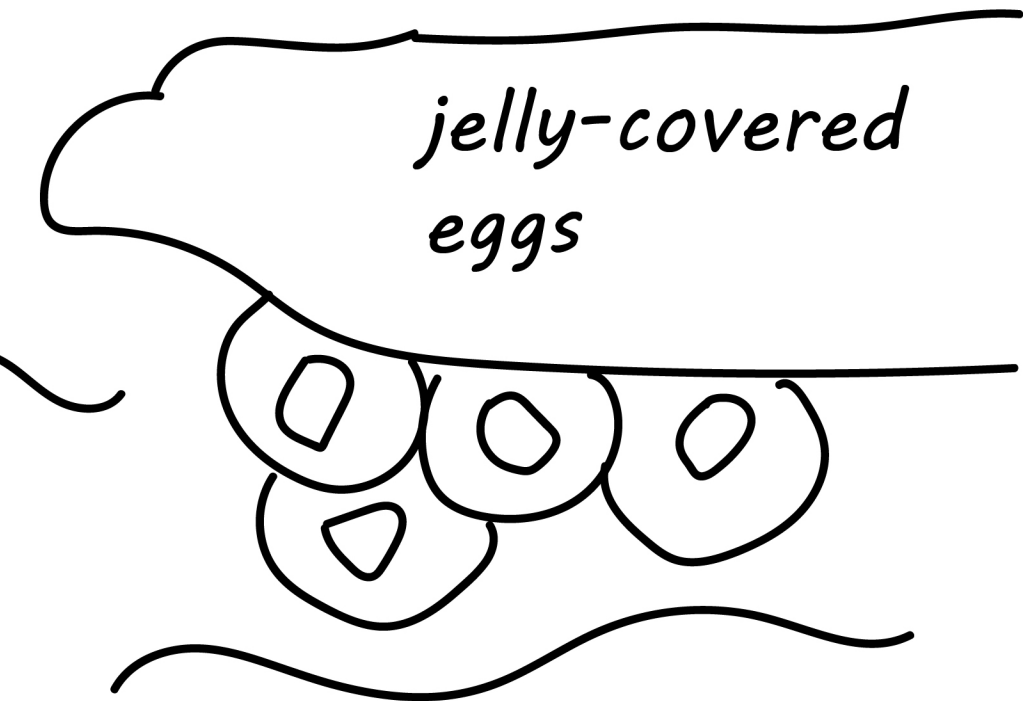

Nocturnal:
active during nighttime

bulging eyes

jelly-covered
eggs

The two-lined salamander
(*Eurycea cirrigera*)
lives in streams under
rocks and leaves

All salamanders are AMPHIBIANS
